

# Wire Mesh for Gardens & Yards

A perfect choice for protection from pests, composting, plant fencing, decoration, and much more.

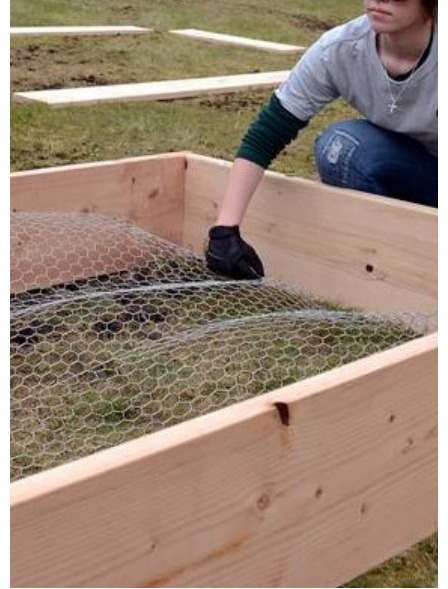

## Strong & Durable, Functional & Decorative

From pest control to retaining walls and composting bins to vertical gardening, the appeal of wire mesh is growing in gardens and in landscaping design!

Wire mesh is available in myriad metals, weave types, and surface finish coatings. This means you can bring any project to life, from controlling plant root direction to safeguarding fragile blooms.

# Explore Your Options: Metals, Weaves & Finishes

Wire mesh can make your gardening easier, as well as add a decorative touch to any outdoor space. Learn more about some of the many options at your fingertips!

## Metals

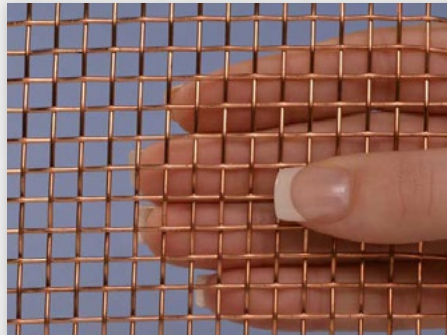

### Brass

#### Benefits

- ✓ Abrasion resistant
- ✓ Higher tensile strength
- ✓ Rust resistant

#### Uses

- ✓ Sculptural pieces
- ✓ Water features
- ✓ Decorative screens
- ✓ Outdoor lighting features
- ✓ Mosquito control

### Copper

#### Benefits

- ✓ Soft, easily soldered
- ✓ Ductile and malleable
- ✓ Excellent thermal and electrical conductivity

#### Uses

- ✓ Root control
- ✓ Snail and slug control
- ✓ Plant protection/barriers
- ✓ Trellises
- ✓ Art pieces and lighting fixtures

### Stainless Steel

#### Benefits

- ✓ Adaptable for most outdoor projects
- ✓ Heat and corrosion resistant
- ✓ Budget friendly

#### Uses

- ✓ Trellises or vertical gardens
- ✓ Mini-greenhouses
- ✓ Pest and critter control
- ✓ Fencing
- ✓ Sift Soils and compost

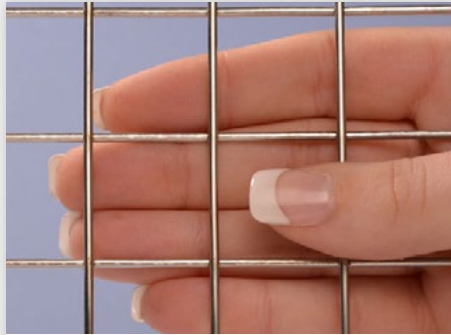

# Welded & Woven Wire Mesh

We know each type of mesh construction serves a specific purpose. Our high-quality products ensure the demands of your project are met.

There are two ways in which wire mesh is typically manufactured:

## Welded

Welded mesh wire is created by resistance-welding. This process allows for strong, consistent welds without filler metal in the joints.

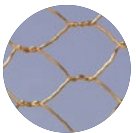

## Woven

Woven wire mesh is made much like fabric, as it is woven on looms. Wires are woven together to create wire mesh in different patterns, such as plain weave and twilled weave.

## Weave Types

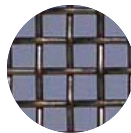

It's important to note that your choice of metal will contribute to a weave's strength and longevity.

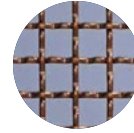

### Hexagonal

Hex mesh is twisted steel wire mesh with hexagonal openings. It is also referred to as chicken wire, as it is often used as fencing and to build chicken coops.

### Plain weave

Plain weave wire mesh can be used for sifting and particle separation as well as pest control.

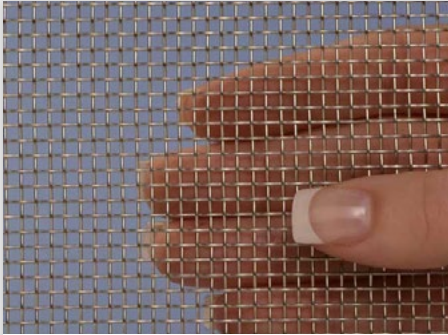

### Intercrimp weave

Intercrimp weave is used in trellises as well as outdoor lighting designs.

# Surface & Finish Coatings

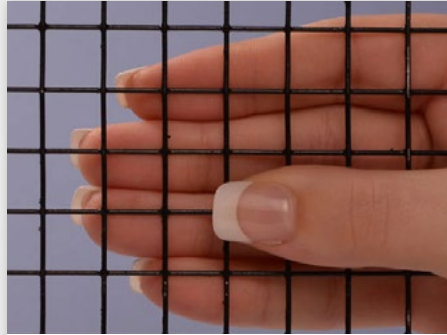

Surface and finish coatings are another facet of wire mesh manufacturing that affect the appearance and functionality of the product.

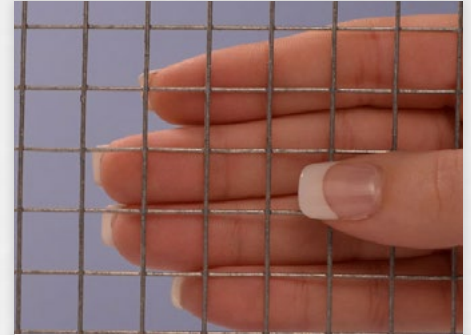

## Mill Finish

Mill finish refers to the surface finish of mesh after it is manufactured. The texture is usually rough, but some mill finished mesh is also polished, smooth, and uniform.

## Poly Coated

Mesh polyester is resistant to solvents, high temperatures, water and chemicals.

## Galvanized

Galvanized mesh can be woven or welded from steel wire. It is then immersed in molten zinc. It is also referred to as galvanized screen wire and galvanized hardware cloth.

TWP, Inc. offers wire mesh in a variety of metals, weaves, and finish coatings. Plus, we supply a variety of roll widths as well as pieces custom-cut to your exact specifications. Our in-house laser cutting services ensure accuracy, no matter the shape's complexity.

# Inspiration Starts Here

Whether you're a home gardener or professional landscaping architect or designer, wire mesh can bring your project to life.

Let your creative juices flow! From art pieces and decorative fencing, to root and rodent control, there's no end to the uses of wire mesh.

We invite you to get in touch to discuss your project with our expert team.
